

NAMCI is excited to introduce a new electronic tool that screens for a number of mental health conditions such as depression, anxiety, opioid risk, PTSD, ADHD, bi-polar disorder, alcohol dependence, perinatal depression and psychosomatic disorders. On-site training is complementary. This is a great opportunity to add revenue while improving the patient's standards of care.

### 1 Assess

Establish a baseline for all patients through annual screening and subsequent testing as medically necessary.

### 2 Administer

Select the appropriate assessment and hand tablet to patient. Patient can complete test in approximately 5-7 minutes.

### 3 View Results Immediately

A secure PIN allows you to print and/or download EMR-ready PDFs.

### 4 Track Progress

Monitor patient progress during treatment by running tests periodically.
